

Summary:

Software Developer with 4.5 years of professional experience designing, developing, and supporting enterprise-level applications. Experienced in application modernization, performance improvement, production support, and secure system development within Agile environments. Strong ability to understand business requirements, collaborate with cross-functional teams, and deliver reliable, scalable software solutions. Also contributed to academic research initiatives involving AI model development and evaluation, reflecting a strong interest in innovation, intelligent systems, and data-driven problem solving.

Software Development & Application Modernization

- Experienced in developing and maintaining enterprise web applications using C#, ASP.NET Core, ASP.NET MVC, Web API, Razor Pages, and .NET Framework.
- Involved in modernizing legacy applications by improving application structure, performance, maintainability, reliability, and user experience.
- Experienced in designing and consuming REST APIs to support integration between front-end systems, backend services, and databases.
- Strong ability to write clean, maintainable, and reusable code aligned with business requirements and technical standards.
- Worked on application server migration and system enhancement activities to improve scalability, reliability, and long-term maintainability.

Database, Reporting & Data Integration

- Strong firsthand experience with SQL Server, stored procedures, queries, database design, data validation, and performance optimization.
- Experienced in developing, modifying, and supporting SSRS reports to deliver accurate business reporting, data insights, and operational dashboards.
- Worked on SSRS report enhancements, including report layout updates, parameter changes, dataset modifications, and troubleshooting report issues.
- Direct experience supporting SSIS jobs/packages for data movement, scheduled processing, and backend data integration workflows.

Accessibility, Security & Quality

- Implemented WCAG accessibility standards to improve application usability, inclusiveness, and compliance for users with diverse accessibility needs.
- Improved web application accessibility by enhancing UI components, form controls, navigation flow, labels, validation messages, and screen-reader compatibility.
- Supported accessibility testing and remediation activities to ensure applications aligned with accessibility and user-experience expectations.
- Experienced in developing secure applications by applying input validation, role-based access, data protection practices, and secure coding standards.
- Direct experience in troubleshooting application issues across development, testing, and production environments.

DevOps, Agile & Production Support

- Experienced in working with Azure DevOps for source control, task tracking, build/release support, and collaboration within development teams.
- Strong understanding of Agile/Scrum development practices, including sprint planning, daily stand-ups, requirement analysis, development, testing, and deployment support.
- Worked on production support activities including issue analysis, debugging, root cause identification, bug fixing, and application enhancements.
- Experienced in collaborating with business users, QA teams, project managers, and cross-functional stakeholders to understand requirements and deliver reliable software solutions.

AI Research & Personal AI Development

- Contributed to part-time academic research involving AI model development, model evaluation, result analysis, and research documentation.

- Assisted in preparing datasets, reviewing model outputs, analyzing performance results, and identifying opportunities to improve AI model accuracy and reliability.
- Explored AI model workflows through personal projects, including data preprocessing, experimentation, result interpretation, and practical application of intelligent software concepts.
- Developed a solid foundation in applying AI concepts to real-world problem-solving, automation opportunities, and data-driven decision support.

Professional Strengths

- Strong ability to analyze business processes and translate functional requirements into technical solutions.
- Strong critical thinking skills with the ability to support business-critical applications, resolve complex issues, and deliver dependable software solutions.
- Proven ability to work in challenging environments, manage priorities, and contribute effectively to both development and production support responsibilities.

Education:

Master of Science in Computer Science | **California State University, Long Beach** | Aug 2019 – May 2021

Skill Set:

Category	Skills / Technologies
Programming Languages	C#, SQL, Python, JavaScript, HTML, CSS
Frameworks & Platforms	.NET Framework, .NET Core, ASP.NET Core, ASP.NET MVC, Web API, Razor Pages
Database Technologies	SQL Server, MySQL, Stored Procedures, Views, Query Optimization
ORM & Data Access	Entity Framework, LINQ, ADO.NET
Reporting & ETL	SSRS Reports, SSIS Jobs/Packages, Report Enhancements, Dataset Modifications
Front-End Technologies	HTML5, CSS3, JavaScript, jQuery, AngularJS
Source Code Management	Git, TFS, Azure Repos
DevOps & Project Tools	Azure DevOps, CI/CD Support, Build/Release Support
Application Development	Enterprise Web Applications, Application Modernization, Production Support
Accessibility	WCAG Implementation, Accessibility Testing, Screen Reader Compatibility, UI Remediation
Security Practices	Input Validation, Role-Based Access, Data Protection, Secure Coding Practices
AI & Machine Learning	AI Model Development, Model Evaluation, Data Preparation, Result Analysis
Development Tools	Visual Studio, Visual Studio Code, SQL Server Management Studio, Anaconda, Jupyter Notebooks
Methodologies	Agile, Scrum, Sprint Planning, Requirement Analysis, Cross-Functional Collaboration

Professional Experience:

Employer: Strategic Systems Inc.

Client: DODD Ohio [October 2021 – Present]

Role: Software Engineer

Ohio Department of Developmental Disabilities (DODD Ohio), State agency that supports Ohio's developmental disabilities service system through digital platforms, data management, reporting solutions, and operational systems used by providers, county

boards, and internal teams. DODD's Information Technology Services division supports application delivery, user access, and technology operations across these services.

Responsibilities:

- Developed, enhanced, and maintained enterprise web applications using C#, ASP.NET, ASP.NET Core, ASP.NET MVC, Web API, Razor Pages, and .NET Framework.
- Supported application development initiatives for DODD Ohio, delivering software solutions aligned with business processes, operational needs, and system requirements.
- Worked on modernization of legacy applications to improve maintainability, usability, performance, and long-term reliability.
- Built and supported database-driven features using SQL Server, Entity Framework, LINQ, ADO.NET, stored procedures, and complex SQL queries.
- Worked on production support activities including issue investigation, debugging, root cause analysis, defect resolution, and implementation of enhancements.
- Developed, modified, and maintained SSRS reports to support operational reporting, business analysis, and data-driven decision-making.
- Performed SSRS report enhancements including layout updates, dataset modifications, parameter changes, and troubleshooting of reporting issues.
- Supported and monitored SSIS jobs/packages for scheduled data movement, backend processing, and integration workflows.
- Implemented WCAG accessibility standards to improve application accessibility, usability, and compliance for users with diverse needs.
- Enhanced accessibility by improving UI components, form controls, labels, validation messages, keyboard navigation, and screen-reader compatibility.
- Applied secure coding practices including input validation, role-based access, and data protection measures to support secure and reliable applications.
- Collaborated with business analysts, QA teams, project stakeholders, and client teams to gather requirements, resolve issues, and deliver effective technical solutions.
- Used Azure DevOps for source control, task tracking, team collaboration, and support of build and release activities in Agile environments.
- Participated in Agile/Scrum ceremonies including sprint planning, stand-ups, requirement discussions, estimation, development, testing support, and release coordination.
- Contributed to performance improvements and system enhancements to support stable, scalable, and user-focused enterprise applications.

Tools & Technologies: C#, ASP.NET, ASP.NET Core, ASP.NET MVC, Razor Pages, .NET Framework, SQL Server, Entity Framework, LINQ, ADO.NET, SSRS, SSIS, Azure DevOps, Git, HTML, CSS, JavaScript, jQuery, AngularJS, Agile, Scrum.

California State University, Long Beach [September 2020] – [April 2021]

Role: Research Assistant – Artificial Intelligence Research

California State University, Long Beach is a public research university in California known for its strong academic and research programs. During my master's program, I worked as a Research Assistant, supporting faculty-led initiatives focused on artificial intelligence model development, experimentation, and research analysis. My responsibilities included assisting with data preparation, model training, testing, and performance evaluation, as well as documenting research findings and contributing to technical discussions around improving model outcomes. I also supported exploratory work involving computer vision and deep learning concepts, helping translate research objectives into practical implementations. This role strengthened my exposure to applied AI research, analytical problem-solving, and collaborative academic projects.

Responsibilities:

- Collaborated with a faculty advisor on research activities involving AI model development, evaluation, and experimental analysis.
- Supported data collection, preparation, preprocessing, and organization for research-based artificial intelligence initiatives.

- Assisted with model training, testing, validation, and performance analysis to assess effectiveness and reliability.
- Assisted to interpreting model outputs, comparing results, and identifying opportunities to improve accuracy and overall performance.
- Participated in refining experimental methods and research approaches to strengthen model outcomes and research quality.
- Supported documentation of research findings, technical observations, and progress updates for academic review and presentation.
- Assisted in exploring practical applications of AI techniques to address real-world problems and research objectives.
- Worked closely with faculty on research discussions to align technical implementation with academic goals and project expectations.
- I worked to prepare research materials, summaries, and support documentation for ongoing academic initiatives.
- Gained firsthand exposure to applied artificial intelligence research, analytical problem-solving, and collaborative project work.

Tools & Technologies: Python, OpenCV, TensorFlow, Keras, NumPy, Machine Learning, CNN, Anaconda, Jupyter Notebooks, Data Preprocessing, Model Evaluation, Research Documentation.

Certifications:

Introduction to Cybersecurity Tools & Cyberattacks – IBM, powered by [Coursera](#)

Operating Systems: Overview, Administration, and Security – IBM, powered by [Coursera](#)

Cybersecurity Compliance Framework, Standards & Regulations – IBM, powered by [Coursera](#)

Computer Networks and Network Security – IBM, powered by [Coursera](#)

Penetration Testing, Threat Hunting, and Cryptography – IBM, powered by [Coursera](#)

Incident Response and Digital Forensics – IBM, powered by [Coursera](#)

Cybersecurity Case Studies and Capstone Project – IBM, powered by [Coursera](#)

Crash Course on Python – Google, powered by [Coursera](#)
